Successful Smart Building Startup Snuk Opens Up New Business Areas

- ▶ *WATTx' (a venture builder powered by the Viessmann Group) spin-off company successfully established in the market*
- ▶ *New investor BEWATEC opens up access to health sector*
- ▶ *Hospital operators and patients benefit from improved infrastructure*

BERLIN, 19.4.2018 - Snuk, WATTx' first spin-off company, has gained a new investor with BEWATEC. In the course of the new cooperation of both companies, the platform for IoT communication will now also be employed in the hospital environment.

IoT Infrastructure Platform for more comfort and more efficient building management

Snuk has set itself the target of building the IoT infrastructure platform of the future. Through individually designed infrastructures, different systems and applications within a building complex – also from different providers – can be seamlessly linked with each other. By doing so, the building management is optimised while significantly increasing transparency for operators.

After having successfully implemented pilot projects in big office and factory buildings, Snuk takes the next step in their cooperation with BEWATEC. BEWATEC is considered an industry leader in point-of-care communication for clinics and hospitals and was the first company to embed the integration of processes around the point of care in modern patient entertainment solutions. Currently existing solutions developed by Snuk include smart energy management through the integration of state-of-the-art sensors for controlling the lighting and heating. Now, BEWATEC and Snuk want to create synergies and in particular provide the opportunity to considerably save energy within old-established hospital structures in a simple manner.

With this project, WATTx demonstrates how with a committed team and a proper organisational framework, a successful collaboration between company builders as well as innovative, forward-thinking companies becomes a reality.

About WATTx

WATTx is a venture builder focused on shaping new and rapidly evolving industries. WATTx creates deep tech products and companies that solve industrial problems, with a user-centric approach. The team conducts focused research, triggering informed solutions that they take from concept to prototype to launch. Whether it be a new product, division, or autonomous venture, WATTx supports industrials on their path to innovation. You can find more information at wattx.io.

About BEWATEC

The BEWATEC Kommunikationstechnik GmbH was founded in 1995 as a specialist for modern entertainment at the patient's bedside by Philipp Schmelter in Telgte. Today, they stand for holistic complete solutions in hospitals where hardware and software work together in perfect unity - from patient-multimedia-terminal, to patient services, to an IP infrastructure. Find more information at www.bewatec.com.
